

Abstract of the Disclosure

An apparatus of water-cooled heat sink comprising a motor means
comprising a motor seat having a room pivoting with a first magnet which both
5 end of it have two rods, a first rod and a second rod, over the room and at the
front of first magnet having a coil at the outside of room; a fan means
comprising a fan seat and a plurality of cooling blades wherein the fan seat
couples to the first rod and the cooling blades couple to the front of first rod of
motor seat, the fan seat has a circular hollow room depositing a second magnet
10 in it; a water-cooled means comprising a seat, a plurality of water-cooled
blades and a pipeline.
